

Cerevoy, LLC Hits Key Milestones in Debut Month, Bridging Texas Innovation with Indiana Research & Development

AUSTIN, TX — Cerevoy, LLC, an emerging medical technology startup, today announced the successful completion of its first month of operations. Headquartered in the Austin, Texas metro area, the company has rapidly established its foundational business systems and launched its digital presence at www.cerevoy.com, signaling the start of its mission to advance assistive med-tech solutions.

While executive operations are based in Texas, Cerevoy's principal technology development is rooted in Indiana. This month, the company focused on bridging these two hubs through critical stakeholder engagement and user-centric research.

Advancing Assistive Technology Through Collaboration

Cerevoy Co-Founder and President **Tom Pado** spearheaded a major initiative involving student research and development teams from the **Rose-Hulman Institute of Technology**. In a move to ensure Cerevoy's concepts are grounded in real-world needs, Pado organized interviews between the R&D teams and potential end users of assistive medical technology.

This effort was made possible through a strategic collaboration with **Sycamore Services**. Cerevoy extends its gratitude to Sycamore Services CEO **Yolanda Kincaid**, whose leadership was instrumental in coordinating clients and arranging transportation, allowing the research teams to gain invaluable first-hand insights.

Strengthening the R&D Pipeline

Co-Founder and CEO **Evan Zimmerman** marked the company's inaugural month with his first official visit to Indiana. During the trip, Zimmerman met with key stakeholders across the research and development sector to align Cerevoy's technical roadmap with regional expertise.

A highlight of the visit included an immersive experience at an Art and Open House event in **Danville, Indiana**, hosted by Sycamore Services. Zimmerman met with several clients, witnessing firsthand the community impact of inclusive programming and further solidifying Cerevoy's commitment to the end-user experience.

"Our first 30 days have been about building more than just a business infrastructure; we are building a bridge between engineering excellence and the people who will actually use our technology," said **Evan Zimmerman**, CEO of Cerevoy. "The collaboration between Rose-Hulman's bright minds and the community at Sycamore Services is exactly the kind of ecosystem Cerevoy thrives in."

About Cerevoy, LLC

Cerevoy, LLC is a medical technology startup dedicated to developing innovative assistive devices and med-tech solutions. Based in the Austin, Texas metro area with primary technology development in Indiana, Cerevoy combines executive strategy with rigorous academic and clinical partnerships to improve quality of life for its end users.
